St Ives High School

The Brief

St Ives High School required an air conditioning upgrade to their classrooms and staffrooms, spanning over three buildings. Glenco was awarded the Mechanical contract to decommission, supply and install brand new Split System Air Conditioners for the School.

The Delivery

The Glenco team decommissioned all the old air conditioning units, installed new pipework, new power circuits, new cages and new isolation switches. In total we installed 54 new indoor and outdoor split system air conditioning units into all of the classrooms, plus new fume cupboards in the science labs. Working in and around the operating hours of the School was crucial to minimise disruptions to the classrooms.

The Outcome

With our expertise and reactive service, we were able to provide both electricians and air conditioning technicians to resolve any emergency work that had to be carried out over the weekend prior to students and teachers returning to the classroom.
